

Integrated New Media Services

In today's complex communications world, you need partners who understand how web, data, social media and communications - especially video communications - help you build and maintain strong relationships.

If you are a nonprofit, a social entrepreneur, a campaign or politician, or a traditional company looking for new and better ways to increase revenue, supporters and business, we can help you.

Our web tools technologies include Joomla, Salesforce, SugarCRM, NGP, Google Apps, Basecamp. We build online campaigns in Facebook and Twitter. We can plan, design, implement and support any of the tools we build for you, giving you as little or as much hands on as you need to get the job done.

We work with designers and developers based in New England and all over the world, allowing us to meet the most challenging timeframes and budgets by assembling teams quickly to accomplish your web goals.

We also come from your world - as fundraisers, activists, politicians, non-profit executives, social entrepreneurs ourselves.

On this site, you'll see some examples of our work as we work to rebuild a more comprehensive view into our collaborations.
